

The Keck Institute for Space Studies  
presents an open lecture:

# Operational Thoughts on Data Driven Decision Making

Astronaut

Tyler N. "Nick" Hague  
NASA Johnson Space Center

---

Wednesday, October 5, 2016

4:30 PM Refreshments

5:00 PM Lecture

Beckman Institute Auditorium  
California Institute of Technology

---

Operational perspectives on the use of telepresence to support planetary exploration will be presented. Based on experiences gained training for spaceflight and supporting operations onboard the International Space Station, considerations for the implementation of robotically enhanced exploration will be discussed in the context of several operational environments: piloting jet aircraft; conducting routine operations onboard the International Space Station, and the execution of extravehicular activity (EVA). Discussions will explore several facets of operational latency, as well as real-time decision making and risk management.

---

No registration is required for this open lecture.  
Seating is limited and is available on a first come, first served basis.
